Baslerstab Assembly Instructions

Congratulations on purchasing a Baslerstab. Assembling it properly is important to experience the full potential of this product, and, more importantly, for a safe ride. Failing to do so might result in serious injuries or even death. Therefore, we strongly recommend to have your Baslerstab assembled by a qualified bicycle mechanic.

Max torque for control levers (shifting, brake, seatpost, suspension) and lock on grips is 4 Nm. The handlebar may be cut to your preferred width, as long as your brake levers still clamp on the $\varnothing 22.2$ section, which is 220 mm long in uncut width.

Weight Limit

This handlebar is designed and tested for a maximum total weight (rider plus bike plus equipment) of 110 kg.
