Wuthocker Assembly Instructions

Congratulations on purchasing a Wuthocker. Assembling it properly is important to experience the full potential of this product, and, more importantly, for a save ride. Failing to do so might result in serious injuries or even death. Therefore, we strongly recommend having your Wuthocker assembled by a qualified bicycle mechanic.

The two bolts clamping the saddle rails should be tightened evenly to 5 Nm. We recommend adding friction paste below the lower cradle. When installing the seatpost in the frame, friction paste must be applied.

Weight Limit

This seatpost is designed and tested for a maximum total weight (rider plus bike plus equipment) of 110 kg.
